

What's New in TEAM 1.09.00

TEAM version 1.09.00 is an update to coincide with SpirALS version 1.93

We have made numerous minor changes to TEAM for the 2014/2015 academic year with one major change listed below. We recommend that TEAM is updated as soon as possible in order to benefit from these changes.

Assessment Details screen is now updateable

TEAM users are now able to update a Learner's Assessment Details in TEAM. The SpirALS users must provide the TEAM user with the permission to do this by selecting the required preference on Tab 3, of the 'User Preferences and Settings' screen within SpirALS.

Details of further minor updates/versions

1.09.00

In order to prevent the 'Incomplete Attendance' screens for staff and students crashing, we have now implemented a paging system to display the sessions missing attendance values, rather than a continuous list.

Some controls were modified to prevent an error which occurred when incomplete data was added in SpirALS.

The Learner's allergy and dietary information from SpirALS is now displayed on the 'Learner Details' screen of TEAM.

The 'Default' checkbox when setting the Default Data File, in the TEAM settings, now works correctly.

The Learner's 'Intended Destination' field has been added to the 'Assessment Details' section of the 'Assessment Details' screen.
